NORMAL RADIOGRAPHIC ANATOMY OF MAXILLA & MANDIBLE

→ Anatomical landmarks in Maxilla :-

- **Incisive foramen :-**
Small ovoid or round radiolucent area located between the roots of maxillary central incisors.
Superior foramina of the incisive canal.
Superior foramina appears as two small radiolucent areas located superior to the apex of the maxillary central incisors; on the floor of the nasal cavity.
- **Median Palatine Suture :-** This radiolucent line between the maxillary central incisors bounded on both sides by dense cortical bone.
- **Lateral fossa :-** Smooth depressed area of maxilla located just inferior & medial to the infraorbital foramen between the lateral incisor & canine. Appears as radiolucent area between canine & lateral incisor.
- **Nasal cavity :-** Large radiolucent above maxillary incisors.
- **Nasal septum :-** Vertical radiopaque partition that divides the nasal cavity.
- **Floor of nasal cavity :-** Dense radiopaque area located at the intersection of the floor of nasal cavity & nasal septum.
- **Anterior Nasal spine :-** V-shaped radiopaque area located at intersection of floor of nasal cavity & nasal septum.
- **Inferior nasal conchae :-** Diffuse radiopaque masses projection within the nasal cavity.
- **Nasolabial canal :-** Well-defined slightly curved radiolucent just above apex of maxillary canine.

- Nose: Uniform & slightly opaque appearance with a border.
- Nasolabial fold: Area of increased radiopacity adjacent to the line.
- Maxillary sinus: Radiolucent area located above the maxillary molars.
- Landmarks in Mandible:
 - General tubercles: Ring shaped radiopacities below mandibular incisors.
 - Nutrient canals: These are vertical radiolucent lines radiograph. More prominent in anterior region.
 - Mental ridge: Thick radiopaque band that extends from the premolars to the incisor region. Appears superimposed on the mandibular anterior teeth.
 - Mental fossa: Radiolucent area above mental ridge. Appearance varies & is determined by the thickness of the anterior region.
 - Mental foramen: Small ovoid or round radiolucency located in the apical region of premolars.
 - Symphysis: Radiolucent line through midline of mandible.
 - Mylohyoid ridge: Dense radiopaque band that extends downwards & forward from the molar region.
 - Mandibular canal: Radiolucent band, outlined by two radiopaque lines.
