Institution ensures adequate training for students in preclinical skills

Mahe institute of dental sciences and hospital follows certain measures for infection control and patient safety procedures and students are trained during preclinical training to follow proper infection control procedures so that same measures can be adapted during clinical procedures. There are many preclinical skill labs tries to imitate the clinical circumstances in the labs so that students can learn the procedures from initial steps to final outcome. These simulators have made dentistry easy by making students learn most of the work in preclinical setup so that actual patient work is easy and accurate.

Preclinical prosthodontics

Preclinical prosthodontics taught in the first and second year of dental education to promote the development of competency and expertise before students work on patients. The college equipped with a separate pre- clinical prosthetics laboratory with the required equipment,an adequate number of Bunsen burners and a plaster room for pre- clinical work. Weekly theory and practical classes conducted to enhance student's learning in pre- clinical and clinical aspects of removable prosthesis fabrication. Individual students are closely monitored by the faculty members to ensure adequate pre-clinical training

Students are trained to perform pre- clinical procedures including cast pouring, temporary denture base adaptation, fabrication of occlusal rims, mounting on the articulator, teeth arrangement, processing, finishing and polishing of dentures. They are trained to get expertise in teeth arrangement.Each exercise shall be deemed to e completed only when the same is checked and signed by the respective faculty in charge.

The college is also equipped with a separate Phantom Head lab with an adequate number of Phantom heads and working tables with attached equipment to train students in pre- clinical fixed partial denture work.

Preclinical Conservative dentistry

Preclinical conservative lab is equipped with many Phantom models which are used for demonstrating and practicing preclinical procedures. This lab gives clear description with illustrations of every instrument and equipment used. Provides details regarding the composition, properties and manipulation of the various dental material. Clear descriptions with images of the Phantom head and typodont teeth used in preclinical laboratory along with a beginner's pictorial guide in using the aerotor and micromotor rotary instruments. Discusses the various features, rules and fundamentals of tooth preparation. Provides step by step pictorial representation along with the explanation of all laboratory plaster and typodont model exercises. Restoration using dental cements amalgam and composite are taught here.

Preclinical pedodontics and preventive dentistry

This lab prepares the students competently for clinical work by training them for multiple preclinical works including straightening of wires, fabrication of different types of clasps, various habit breaking and functional appliances, space maintainers and typodont model exercises. Completion of this preclinical work is the indication that students are competent to perform clinical work.

Preclinical orthodontics

Preclinical orthodontic provides appropriate guidance in exercises which help the students to master the techniques in orthodontics during clinical procedures. The Students are guided and monitored to perform preclinical work like basic wire bending and certain basic orthodontic appliances including fabrication of different types of clasps, functional appliances.
